Untapped Energy

# Login to portal.azure.com

The image shows the Microsoft Azure login interface. It features a solid blue background. At the top center, the text "Microsoft Azure" is displayed in white. Below this, a white rectangular box contains the login form. Inside the box, the Microsoft logo is at the top left, followed by the text "Sign in" and "to continue to Microsoft Azure". There is a text input field for "Email, phone, or Skype". Below the input field, there are two links: "Can't access your account?" and "No account? Create one!". A blue "Next" button is located at the bottom right of the white box.

Next

A resource group (RG) was created for each team. Use the assigned RG to create all your resources.

The screenshot displays the Microsoft Azure portal interface. On the left, a dark sidebar contains a navigation menu with options like 'Create a resource', 'All services', and 'FAVORITES'. The 'Resource groups' link is highlighted in the 'FAVORITES' section, and a red arrow points from it to the main content area. The main area shows the 'Resource groups' page for the subscription 'untappedenergy2018'. It includes a search bar, filters for 'Subscriptions: Azure Pass', 'All locations', 'All tags', and 'No grouping'. A table lists one resource group: 'Team-1', associated with the 'Azure Pass' subscription and located in 'West US 2'.

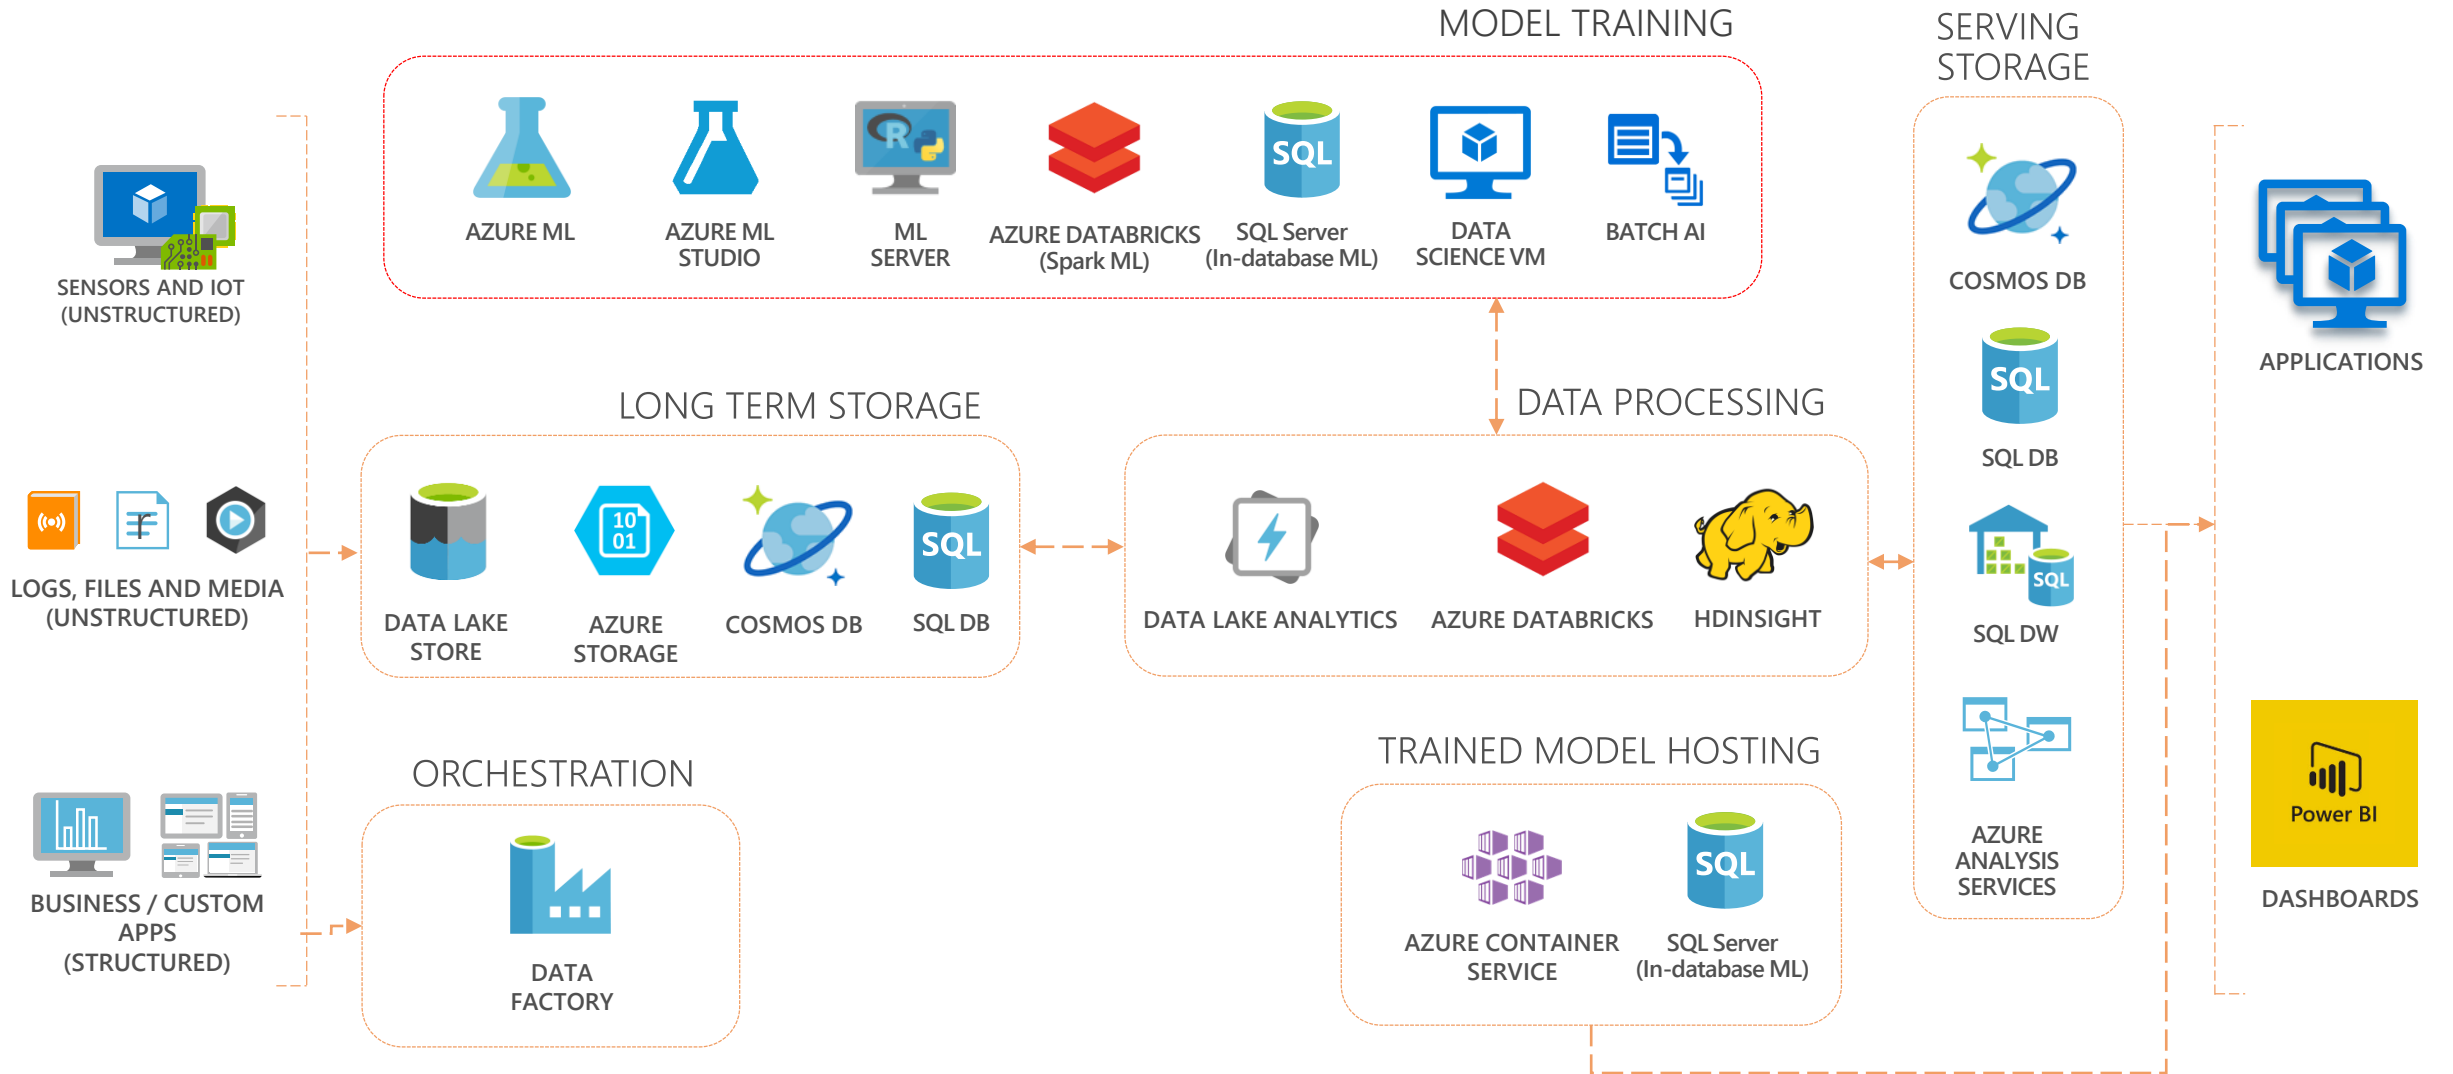

NAME	SUBSCRIPTION	LOCATION
Team-1	Azure Pass	West US 2

# You can create a resource in different categories (Storage, Analytics, AI, IoT, etc.)

# Possible Options to Consider for Data Analysis

1. Azure Machine Learning Studio (visual drag and drop)
2. Azure Machine Learning Service (code-first)
3. Data Science Virtual Machine
4. Azure Databricks
5. Cognitive Services
6. Time Series Insight

# Azure Machine Learning Studio

Collaborative, drag-and-drop tool to build, test, and deploy predictive analytics solution

- Browser-based, no coding, graphical tool to build predictive analytics apps
- Serverless Azure service
- 99.95% SLA
- Supports multiple algorithms, data source and data formats.
- Trained models can be deployed as Request-Response Service (RRS), Batch Execution Service (BES).
- [Gallery](#) includes community contributed solutions.

# Azure Machine Learning Service

Azure Machine Learning service provides a cloud-based environment you can use to develop, train, test, deploy, manage, and track machine learning models.

Azure Machine Learning service fully supports open-source technologies, so you can use tens of thousands of open-source Python packages with machine learning components such as TensorFlow and scikit-learn. Rich tools, such as [Jupyter notebooks](#) or the [Visual Studio Code Tools for AI](#), make it easy to interactively explore data, transform it, and then develop, and test models. Azure Machine Learning service also includes features that [automate model generation and tuning](#) to help you create models with ease, efficiency, and accuracy.

Documentation:

# Use your favorite IDE

Microsoft Azure Notebooks

Augment the tools that you know and love with the Azure ML SDK

Build and train models directly from your environment

Start from prebuilt packages or your own code

# Azure Machine Learning

Build and train models locally, with Remote VMs or massive Batch AI clusters

Track experiments for reproducibility and auditing needs. Identify and promote your best models

Deploy and manage your models using containers to run them anywhere

Monitor your models performance from a single location

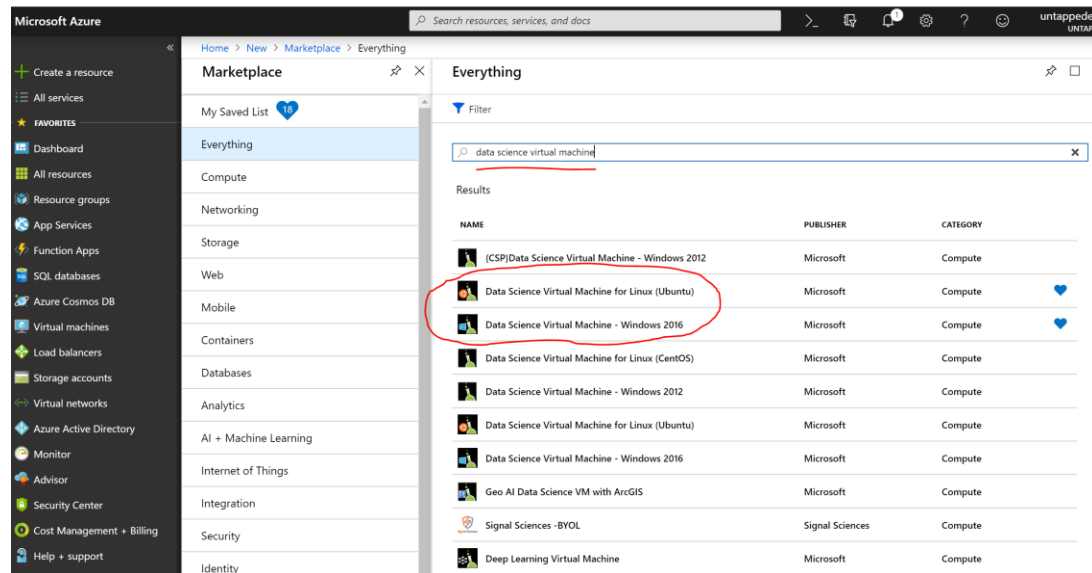

# Data Science Virtual Machine?

- Custom VM image on Azure Marketplace
- Contains a set of data science, Azure tools/SDKs
- All pre-configured and ready to use
- Pay for cloud hardware usage only. No separate software charges!
- Pointers to gallery, samples, documentation
- Windows and Linux Versions
- Up and running quickly
- Please start with a small VM. You can always change the size if necessary, later.

# Provision a Data Science Virtual Machine on Azure

<https://docs.microsoft.com/en-us/azure/machine-learning/data-science-virtual-machine/provision-vm>

## Create a virtual machine

Basics Disks Networking Management Guest config Tags Review + create

Create a virtual machine that runs Linux or Windows. Select an image from Azure marketplace or use your own customized image. Complete the Basics tab then Review + create to provision a virtual machine with default parameters or review each tab for full customization. Looking for classic VMs? # Azure Time Series Insights

Documentation:

<https://docs.microsoft.com/en-us/azure/time-series-insights/time-series-quickstart>

IoT scale time-series data store

Schema-less store, just send data

Easy IoT Hub connection

Store, query, and visualize billions of events

Get near real-time insights in seconds

Build apps using Time Series Insights APIs
